
790 OVERHEAD GUIDE SIGN LIGHTING

790.1 Freeway Overhead Guide Signs

Provided that signs have Demountable Characters and Shields with Type VIII or Type IX sign sheeting, and the background sign sheeting is at minimum Type III, overhead guide signs shall not be lit, except for segments from two – three (2-3) miles, prior to and through a Freeway to Freeway interchange, such that at least two advance guide signs are lit.

All light fixtures used for overhead sign lighting shall be an approved 85 watt induction fluorescent (IF) fixture.

790.2 Crossroad Overhead Guide Signs

Crossroad overhead guide signs will not be lit, unless the local jurisdiction will wholly finance the installations, maintenance, and operation of the lighting facilities.
